Dear {Manager},

I would like to enroll in the Chartered Financial Risk Manager (CFRI™) program to strengthen my ability to identify, quantify, and manage the financial risks facing our organization. As financial markets and operating environments become increasingly uncertain, stronger risk capabilities can help us identify exposures earlier, make better-informed capital decisions, and strengthen our preparedness for financial disruption. By attending this program, I will gain advanced capabilities in enterprise risk governance, risk quantification techniques and financial risk measurement across market, credit, operational, and liquidity risk. Together, these skills will strengthen my ability to evaluate financial exposures, support informed capital decisions, and contribute to greater organizational resilience.

Led by Michael Bryant, a highly experienced Chartered Accountant and financial risk executive, this program combines technical risk expertise with practical insights from global banking and advisory experience. Training in liquidity modelling and contingency planning will help strengthen our preparedness for funding pressures, while investment risk and due diligence will support more informed capital-allocation decisions. The program also covers dashboards, KRIs, risk technology, and AI, enabling me to translate complex risk information into clearer and more actionable management insights. Some of the key skills this program will bring include:

- Strategic Financial Risk Management & Risk Appetite
- Enterprise Risk Management (ERM) & Risk Governance
- Value at Risk (VaR), Stress Testing & Scenario Analysis
- Market, Credit & Counterparty Risk Management
- Operational & Liquidity Risk Management
- Treasury Risk Management & Hedging Strategies
- Investment Risk Assessment & Due Diligence

I believe these capabilities will provide meaningful value to both my role and the organization. After completing this program, I will be better equipped to identify emerging vulnerabilities, strengthen financial risk controls, and support more informed decisions under uncertainty. I will also be able to apply stronger approaches to capital allocation, crisis preparedness, and technology-enabled risk reporting, helping improve the resilience and quality of our risk-management processes. In addition, I will earn the CFRI™ designation, further strengthening the professional expertise and credibility I bring to the organization.

I would greatly appreciate your approval to attend this virtual training program.

Sincerely,
Your Name
